

DIY STRAW SAXOPHONE

MATERIALS

- ◆ Straw
- ◆ Scissors

STEPS

1. Start with a clean straw and clean hands
2. Use your front teeth to flatten the top end of the straw into a double reed and cut it into a point
3. Cut 3-4 holes into the body of the straw (this can be made easier by pinching the straw and cutting out a diamond shape)
4. To play, put the straw into your mouth and blow, making sure the reed can vibrate. Change the pitch by covering different holes!
